

Desktop Icon Installations

If for any reason the Desktop Icon does not appear after installation of an electronic directory the following steps can be taken to install separately.

1. Navigate to the installed folder under Program Files (This may have been noted in the installation process.)

Example: C:\Program Files\DEX\Chaska-Waconia MN

2. From here go into the selector folder and right click on 'Selector' and select 'Send to => Desktop (shortcut)'.

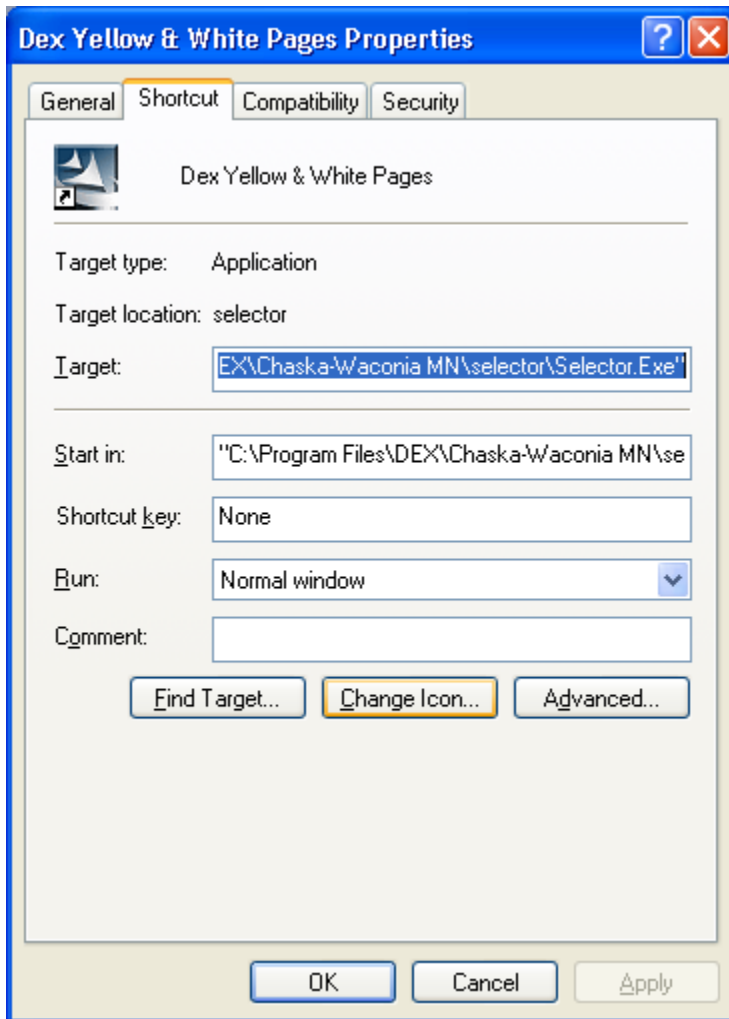

You will now have a standard icon on the desktop.

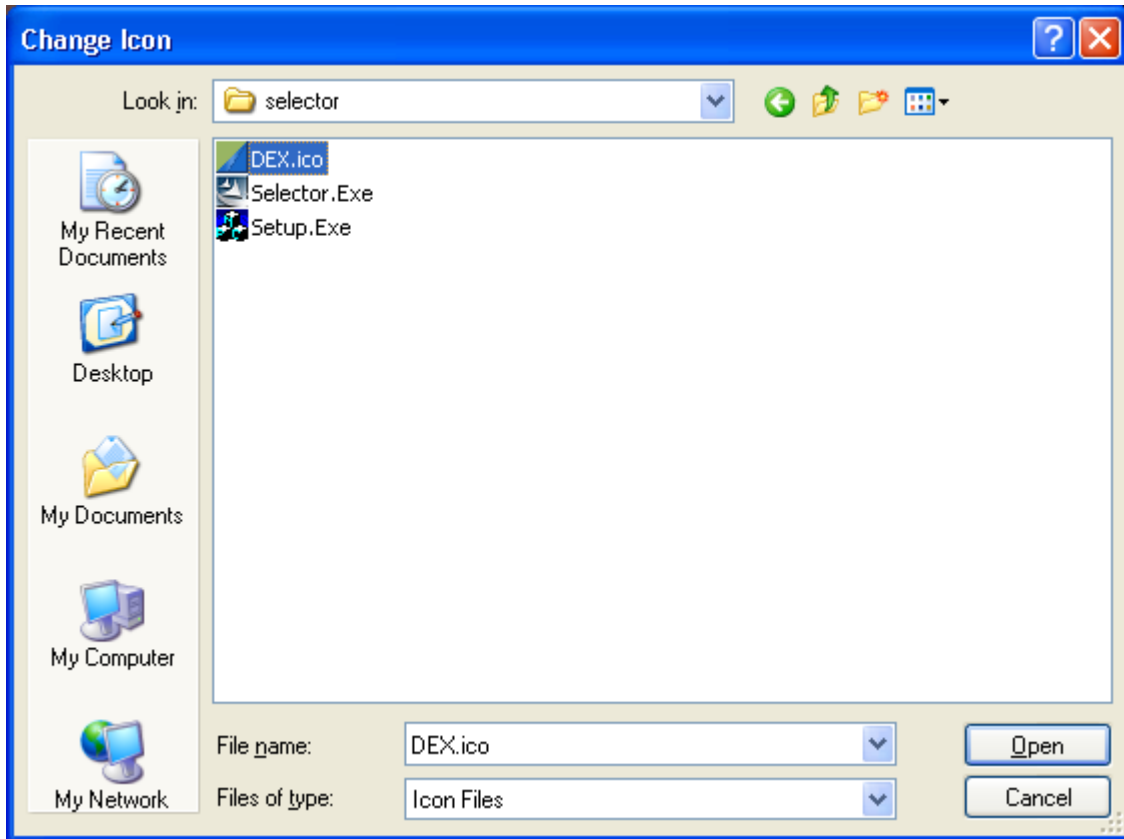

The next steps are optional but recommended.

1. Right click on the selector(on the desktop) and select rename. Rename the file to 'Dex Yellow & White Pages'.

2. Right click on the selector and click 'Properties'. Click on the shortcut tab and then click on 'Change Icon'.

3. Navigate to the same directory the selector was in and select the icon image labeled 'Dex'. Click apply then okay in the properties window.
